## THE FUTURE of WASHROOMS

*“YOU CAN’T TOUCH THIS!”*

Touch-less fixtures such as faucets, soap dispensers, toilets, and towel dispensers have been used to help prevent the spread of and cross contamination of germs.

Integrated basin counter tops (eliminates seams where nasty little things like to collect) and soap dispensers located over the sink bowl (to direct the soap drips in the sink and not on the counter) make these washrooms easier to keep clean.

Seamless floors eliminate nooks and crannies where dirt likes to collect which makes cleaning the floors that much easier.

Locating the touch less towel dispenser over the counter and above the waste bin hole reduces the travel of wet hands to keep the water and mess contained and off the floor.

And finally now that you have used the facility without touching fixtures the room has been designed so there is no door that you have to open to exit the room – truly touch-less!

The easier a washroom is to clean the cleaner it will stay and the healthier it will remain!
