MATERIALS & RESOURCES

PAPER IS NOT THE ONLY THING WITH RECYCLED CONTENT!

On average the construction materials for this facility contain more than 7.5% of the recycled content.

75% of the construction waste INCLUDING the building that was demolished was diverted from the landfill by sending the waste to recycling depots.

Over 10% of the materials were manufactured locally, which means less shipping which helps to reduce emissions through transportation. Not an easy task given our island geographical location.
